

## A sustainable garden in town

On 21<sup>st</sup> May 2023, 10 students and 3 teachers from 'George Baritiu' College of Economics had the opportunity to visit in Munich, Germany models of sustainable gardens that could be created in towns even if the space is very limited. The exhibition KEEP GREEN, FEEL COOL organized in the city centre of Munich offered solutions for recycling water, for collecting rain water, for growing various plants in vertical plan where the space for garden is inexistent or on the extended sills, for alternative solutions to fertilizers or for building insect hotels and many other innovative ideas to help people create their own sustainable town garden with little resources. It was a fascinating exhibition with an educative impact on the participants.

**"All inclusive" für Wildbienen**

Diese wandgebundene Fassadenbegrünung ist besonders bienenfreundlich gestaltet:

Stauden mit überlappenden Blühperioden liefern das ganze Jahr über Pollen und Nektar. Regengeschützte Hohlräume laden zum Nisten ein und bieten Schutz in der Nacht.

Die Bastelanleitung für die Nisthilfen gibt es auf unserer Homepage.

*Adiantum species*
